

IEC & ASSOCIATES

Our Consultants have the necessary patent related education and broad technical expertise required for IP enforcement cases. This allows our experts to provide professional expert testimony and ensures justice is served by scientific and accurate determination of the facts.

Our mission to provide excellent service for patent infringement investigation, analysis, reverse engineering and product teardown will enable you to efficiently and cost effectively litigate cases. We serve law firms and corporate clients.

Testimonial:

“IEC supplied my client with infringement claim charts for 1/3 the cost of the major reverse engineering firms and in far less time. The quality of the infringement analysis was excellent and, as a result, my client was able to negotiate a favorable contingency fee agreement with a major IP law firm and obtain a substantial investment in the enforcement effort.”

Eric Halber, Esq. –
IP Litigation Enforcement Attorney-
Apex IP, Apex NC.

IEC & Associates provides Electrical and Electronic Patent Infringement Analysis, Claim Chart Mapping, Reverse Engineering, Product Teardowns, Design Engineering, Forensic and Investigative Engineering, Failure Analysis, and Expert Witness Services for Attorneys, Insurance Companies, Industry and Government. We specialize in electrical and electronic systems, products and devices.

We specialize in electrical and electronic systems, products and devices. IEC & Associates offers a broad range of technical expertise and services. We are committed to our clients and strive to provide findings, opinions, and reports in an unbiased, prompt and cost effective manner. Our goal is to serve our clients with answers to their questions and effective solutions to their problems.

Issues addressed include all aspects of the product or system under patent infringement or forensic investigation review, including design, fabrication, production, operation, failure analysis, reverse engineering, environmental conditions, agency compliance, safety, and product testing of electrical and electronic systems, products and devices as well as computer systems, hardware and software.

IEC & Associates can assist your organization in pre-suit technical patent infringement analysis, reverse engineering and product teardown descriptions. In addition, we can provide responsive prior art analysis during the pre-trial and negotiation phases of your suit. Using circuit analysis, product teardowns, process analysis and system analysis, our consultants can support infringement allegations based upon a device's design, implementation, construction and end use. As such, we provide a one-stop resource tailored to reduce the cost, time and complexity of the analysis process.

Our expertise also includes reverse engineering with respect to infringement analysis and support including claim chart preparation in the areas of electrical and electronic systems, products, devices and software implementation. We are a highly competitive cost effective technical resource available for all phases of an enforcement program.

Technical Services and Capabilities:

- Circuit Analysis
- Claim Chart Mapping
- Circuit Extraction
- Competitive Analysis and Benchmarking
- Firmware Disassembly
- Functional Analysis
- Maximizing ROI
- Patent Claim Mapping
- Patent Consultations, Examinations and Infringement Avoidance
- Patent Reexaminations
- Product Characterization
- Product Interoperability
- Patent Infringement and Patent Validity Analysis
- Process Analysis
- Product Mapping
- Product Teardowns
- Reverse Code Engineering (RCE)
- Reverse Engineering (RE)
- Software Analysis
- System Level Analysis

Technical Language Translation Support

We offer refined technical translation services and support regarding previously translated technical, engineering, and scientific documents. Languages supported include Mandarin, Korean & Japanese. Our team has an excellent command of both the source and target languages with an in-depth understanding of the subject matter and its terminology. Using their technical expertise, industry expertise, writing skills and computer literacy, they will analyze translated documents to insure precise target language is reliably and effectively understood and communicated to accurately and clearly litigate your case.
